DESCRIPTION

TOUR-200R, smooth and controlled communication in guided tours The TOUR-200R is a bi-directional wireless receiver for guide systems that stands out for its compact design, intuitive operation, and advanced technology. It allows not only clear reception of the guide's audio but also two-way communication when the bi-directional function is activated, facilitating interaction with visitors. Ideal for use in environments like museums and tourist tours, it ensures a high-quality communicative experience in group settings. Advantages of the TOUR-200R This device offers features that optimize the guide and visitor experience: Bi-directional communication: the ability to send audio from a receiver to the transmitter and other receivers, one at a time, when this function is enabled. Extended autonomy: a 1300 mAh rechargeable internal battery providing up to 17 hours of continuous use. Robust and lightweight design: a durable casing with minimal weight, ideal for long usage sessions. Multi-channel: features 18 channels and allows simultaneous operation of up to 4 different channels. LCD screen: makes it easy to control volume, battery level, and the selected channel. Why choose the TOUR-200R? The TOUR-200R is an effective solution for tourism and cultural professionals due to its combination of technical features, ease of use, and operational reliability: Range of up to 100 meters, suitable for both indoor and outdoor tours. Built-in microphone with PTT button, ideal for activating communication when necessary. Simple controls: on/off switch, channel selector, and volume adjustment. Versatile connectivity: headphone output with a 3.5mm jack connector and charging via micro USB B port. Included and optional accessories: earphone, holder, and compatibility with charging cases and synchronizers.
